

Conference Report

To whom this may concern,

I am a second year PhD student (European doctorate in Teacher Education) studying at Eotvos Lorand University. I have participated at the 15th International Conference of Doctoral Studies in the field of Education of Natural Sciences held in Komarno, Slovak Republic.

After opening ceremony of the conference, I got very important views on Educational Science from the two plenary lectures. They are Development of experimental design skills and the teacher's Creative Digital Literacy. The professor Beata explained two kinds of skill-hard skill and soft skill in detail. These two skills play a key domain to transformation education and we need the balance of skills for Teachers and Students.

My topic is "The Relationship between Principal's Transformational Leadership styles and Teachers' Job Performance in Selected High Schools in Monywa Township in Myanmar."

The audience was very interested in my presentation. I got many feedbacks from experienced supervisors and professors and these are very reasonable and practical. Their questions give a new insight on my research. For example, what are the other factors that influence teacher job performance? What kinds of motivation do you like and why? What challenges do the principals encounter as transformational leaders? I answered motivation and administrative support are also important for teacher performance. As motivation, I like rewards because everybody wants praise. I argue that reward is very important with some examples.

The information and the experience during this two-day conference (22-23 Nov, 2019) help my studies and my PhD thesis. I found very knowledgeable and interesting topics such as Quality Assurance: National Solutions- Hungary and Germany, Creation of interactive animations and their use in practice, Assessment of science process skills, etc.

I got new ideas and insights of the trends regarding the theoretical and practical aspects of my research field. This conference can help me discover how to be more productive as a young researcher.

By attending this conference, I improved the knowledge on Educational Sciences and got valuable ideas on my studies.

Regards,
