

Report of the Goldschmidt-2021 conference for Talent Support Council at ELTE University

Davaakhuu Tserendorj

Doctoral school of Environmental Science

I am Davaakhuu Tserendorj, 4th year Ph.D. student, working on Urban geochemistry research project at Lithosphere Fluid Research lab (LRG), ELTE.

Recently, I attended Goldschmidt-2021 conference (gather online), Lyon, France with a support of Talent council. The conference was gather online held between 04-09th of July and was very diverse due to the sessions, workshops, and awards presentations, such as Union Symposia, Medal and Award Lectures sessions, short courses, and networking events. In the other hand, I had a many opportunity to jump through the sessions which I could learn new ideas and analysis in my research field.

Accordingly, I presented in 12gO2 – Isotope geochemistry for environmental health assessment and remediation – Theme 12: Environmental Geochemistry and human health. Topics could include, but will not be limited to: contaminant emissions from anthropogenic and geogenic sources; contaminant fate and transport within the environment; human exposure and health effects; monitoring, measurement and modelling; remediation and intervention.

Here is link for this sessions and Flash talk presentation were recorded in this link: <https://2021.goldschmidt.info/goldschmidt/2021/meetingapp.cgi/Session/2528>

Here I am sharing the e-presentation link through conference link:
